

Information Disclosures under Basel III Capital Requirement As of 30 June 2015

Scope of Information Disclosure

TISCO Bank discloses information under Basel III capital requirement based on the bank position only and in accordance with the Bank of Thailand's notification SorNorSor 4/2556 on the regulatory capital disclosure requirement for commercial banks. In addition, TISCO Bank adopts a materiality concept which is in consistent with accounting concept.

Capital Structure

According to the Bank of Thailand's regulation, the regulatory capital for commercial banks registered in Thailand and based on Internal Rating Based Approach (IRB) consists of Common Equity Tier 1 (CET1), Additional Tier 1, and Tier 2 Capital. CET1 capital includes paid up capital, premium (discount) on share capital and warrants, statutory reserve, reserves appropriated from net profits, net profit after appropriation, and other components following the BOT's regulation, which are the net amount after regulatory adjustments such as goodwill and intangible assets, where Additional Tier 1 capital consists of money received from the issuance of non-cumulative preferred stocks and money received from the issuance of debt instruments that are subordinated to depositors, general creditors, and other subordinated debts of the bank, which are the net amount after regulatory adjustment such as reciprocal cross holding in the Additional Tier 1 capital of banking, financial and insurance entities.

Tier 2 capital is the sum of instruments issued by the bank which meet the criteria for inclusion in Tier 2 capital, general provision and surplus of provision, less any deduction from Tier 2 capital.

For TISCO Bank, Tier 1 capital primarily comprises of paid-up share capital and cumulative profit after appropriation, while Tier 2 capital mostly consists of long-term subordinated debentures issued. Additionally, the deductions from shortage of reserve are also incorporated in Tier 1 capital.

Capital Adequacy under Basel III Capital Accord

Based on minimum capital requirement under Basel III effective since the beginning of 2013, since December 31, 2009, the Bank has officially adopted the Internal Rating Based Approach (IRB) and Standardised Approach (SA-OR) for regulatory capital calculation of credit risk and operational risk respectively. The IRB approach is considered the more sophisticated calculation given that it can truly reflect the bank risk profiles as well as assets quality with more prudent than the calculation from the Standardised Approach (SA) which is less comprehensive risk weights subject to quality of assets. The risk parameters relied on determining the capital requirement consists of Probability of Default (PD), Loss Given Default (LGD), and Exposure at Default (EAD).

Capital adequacy of the Bank is still in strong position and adequate to support business expansion into the future. At the end of June 2015, the regulatory capital adequacy ratio (BIS ratio) based on IRB approach stood at 17.54% remaining higher than the 8.50% required by the Bank of Thailand. While Total Tier-I capital adequacy ratio stood at 13.13%, which remained higher than the minimum requirement at 6%.

Market Risk

An effective market risk management has been established by adopting the risk management policy approved by the Risk Management Committee of parent company, supported by Enterprise risk management function in order to ensure appropriate application of the policy in all functions.

In accordance with the market risk capital requirement based on the Bank of Thailand's rules and regulations, since the trading book position of TISCO Bank is still below the minimum thresholds, the Bank is not required to maintain its capital to support the market risk. However, internal market risk assessments including all positions related to price and interest rate change has been performed to ensure the effective market risk management still in place.
